

Rooftop Solar

- Deciding to install rooftop solar is a customer choice
- We recommend that customers read the fine print on contracts and understand the difference between purchasing and leasing
- If there are any statements made that they will no longer receive an EPE bill, they should contact us before signing a contract
- We typically hear that customers are told that they will “be off the grid” if they install solar panels and this usually not the case
- A residential customer guide to solar power can be found on our website at [epelectric.com](https://www.epelectric.com) by searching rooftop solar or by sending them this link: <https://www.epelectric.com/renewables-tech/distributed-generation/residential-consumer-guide-to-solar-power>
